

Report title Indicator	Effluent Discharge Report, v1.0 1.20.2
Instructions	<p><i>This template is intended for reporting feed mill effluent discharge results to ASC.</i></p> <p><i>Indicate in table 1 the production year that effluent discharge is reported for. The total quantity of discharged effluent is calculated automatically.</i></p> <p><i>In table 2, specify the volume of discharged effluent ('Quantity discharged') by destination during the indicated production year.</i></p> <p><i>List all effluent destinations, separated into the categories 'freshwater' and 'other water' ('freshwater' is categorised as $\leq 1,000$ mg/L Total Dissolved Solids, and "other water" is categorised as $> 1,000$ mg/L Total Dissolved Solids), used during the production process, from ingredient receiving to final product dispatch.</i></p> <p><i>In table 2, list all effluent volumes by destination, separated into the categories 'freshwater' and 'other water' ('freshwater' is categorised as $\leq 1,000$ mg/L Total Dissolved Solids, and "other water" is categorised as $> 1,000$ mg/L Total Dissolved Solids.), used during the production process, from ingredient receiving to final product dispatch.</i></p> <p><i>Water destinations are:</i></p> <ul style="list-style-type: none"> <i>• municipal treatment facilities;</i> <i>• surface water (including wetlands, rivers, lakes);</i> <i>• ground water;</i> <i>• seawater.</i> <p><i>Note that 'effluent' is defined by ASC as 'Liquid waste flowing into a water body such as a river, lake, or lagoon, or a sewer system or reservoir'. Water volume is reported in mega litre (ML). One mega litre is equivalent to 1000 m^3 or 1000000 litre.</i></p>
